PROFESSIONAL SUMMARY

Software Development Engineer II with **3+ years** at Philips building production-grade backend services and full-stack product features across **Java, Spring Boot, Node.js, React.js**, and **TypeScript**. Specializes in REST APIs, microservices, event-driven systems, and performant data access, with test-driven delivery (JUnit, Mockito, Jest) and a track record of resolving critical production issues. AWS Certified. LeetCode Top 10%.

KEY SKILLS

Languages: Java, JavaScript, TypeScript, C++
Backend: Spring Boot, Java EE, Node.js, Express.js, REST APIs, Microservices, Kafka, API Gateway, Async Programming
Frontend: React.js, TypeScript, Micro Frontends (Module Federation), Webpack, Vite, HTML, CSS
Databases: PostgreSQL, MySQL, MongoDB, Redis
Testing: JUnit, Mockito, Jest, Unit & Integration Testing
Cloud: AWS (S3, ECR, Secrets Manager), Docker
AI & Tools: LangChain, LangGraph, MCP, Prompt Engineering, Git, Linux

PROFESSIONAL EXPERIENCE

Philips Bangalore, India
Software Development Engineer II Jul 2026 – Present

- Designed and built backend services and REST APIs in **Java, Spring Boot**, and **Node.js** across **5+ microservices** for **Ultrasound Fleet Manager**, including service-to-service communication and data integration.
- Built and enhanced **React.js/TypeScript** dashboards for fleet utilization, operational metrics, and real-time device data; tuned high-traffic APIs via caching and query optimization.
- Built a self-serve onboarding feature (**React.js** UI + **Node.js** backend) that auto-generates an approval pull request, replacing manual setup and cutting onboarding effort by **95%** for internal teams.

Philips Bangalore, India
Software Development Engineer I Apr 2024 – Jun 2026

- Built full-stack features for **Ultrasound Fleet Manager** across **7+ microservices** – React.js dashboards, Spring Boot and Node.js services, and REST APIs for real-time device metrics.
- Optimized high-latency APIs via caching and query tuning, cutting response time **15% (400ms → 340ms)**; primary escalation point for critical production incidents.
- Built a search-backend-agnostic **Backstage** search plugin indexing Confluence spaces into the Developer Portal’s unified search; deployed org-wide across Philips engineering.

Philips Bangalore, India
Software Development Intern Jun 2023 – Apr 2024

- Developed full-stack features (React.js, Node.js/Express) and REST APIs for the Backstage Developer Portal serving **1,000+ internal developers**; built reusable UI components and backend integrations adopted across the portal.

PROJECTS

Event-Driven Booking Platform | *Spring Boot, Kafka, PostgreSQL, Docker* | GitHub

- Built a scalable microservices event-booking system with Spring Boot, an API Gateway pattern, and asynchronous Kafka messaging for decoupled booking and order-processing services.
- Implemented internal service discovery and REST API communication across distributed services, with Docker for reproducible builds and consistent local/CI environments.

Backstage Scaffold Insight Viewer Plugin | *Open Source, TypeScript, React.js, Node.js* | npm

- Published an open-source full-stack Backstage plugin (React.js + Node.js) with real-time analytics dashboards and REST APIs; adopted by teams to track plugin usage.

EDUCATION

Lovely Professional University Punjab, India
B.Tech in Computer Science and Engineering | GPA: 8.41 / 10 Jul 2020 – May 2024

CERTIFICATIONS & ACHIEVEMENTS

AWS Certified Cloud Practitioner
LeetCode Rating: 1781 | 700+ problems solved | Top 10% globally
Resolved production crash in JSONCrack (10K+ GitHub stars) affecting thousands of active users – merged into main
