SUMMARY

Backend-focused Software Development Engineer with **2 years of experience** building and scaling **microservices with Java and Spring Boot**. Skilled in designing REST APIs, optimizing performance, and owning services end-to-end from development and testing to deployment on AWS. Comfortable working across the stack with basic React and AI-assisted UI development, and managing containerized releases via **Docker, Amazon ECR, and Helm**.

TECHNICAL SKILLS

- **Languages:** Java, JavaScript
- **Frameworks:** Spring Boot, Microservices, REST APIs, WebClient, Node.js, Express.js, React, JUnit, Mockito, SLF4J
- **Cloud & DevOps:** AWS (Glue, S3, ECR), Docker, Helm, GitHub Actions, CI/CD, Deployment Management
- **Databases & Messaging:** RDBMS, Redis, Kafka
- **Practices:** OOPs & SOLID, Unit Testing, Agile

EXPERIENCE

Philips - Software Development Engineer

Sept 2025 - Present *Bangalore, India*

- Own backend development for Fleet Manager, a microservices-based platform, delivering feature APIs with Java and Spring Boot in an Agile environment.
- Designed reliable inter-service communication using Spring WebClient, replacing blocking calls and improving responsiveness across dependent services.
- Improved API performance by parallelizing independent operations with CompletableFuture (multithreading), significantly reducing end-to-end latency for high-traffic endpoints.
- Reduced query latency further through database indexing and query optimization, and as part of an NFR, improved API latency to under 3 seconds through a combination of indexing, threading, and caching.
- Implemented Redis caching to store and reuse authentication tokens, cutting redundant token lookups and improving API response times.
- Authored AWS Glue scripts to transform and load data for backend database workflows.
- Diagnosed and resolved multiple critical, production-breaking issues, improving service stability and reliability.

Philips - Software Development Engineer Intern

Aug 2024 - Sept 2025 *Bangalore, India*

- Developed and shipped feature APIs for the Fleet Manager microservices application using Java and Spring Boot.
- Wrote JUnit unit tests to ensure code quality and prevent regressions, maintaining 80% code coverage across services.
- Supported the deployment and testing lifecycle, learning release management and containerized delivery workflows.

PROJECTS

Multi-Agent Test Automation Framework

Agentic system that automates end-to-end test script generation from a UI codebase.

- Built an orchestrator agent that parses the UI repository to construct a knowledge graph and delegates work across specialized agents.
- Locator Identifier and Script Generator agents use the knowledge graph to produce a targeted `locators.json` and auto-write test scripts, while a Verifier agent runs them and feeds failures back for self-correction (up to 3 retries) before flagging.

Macropolitique (Freelance) — macropolitique.in

Article publishing platform for creating, posting, and reading articles.

- Built full-stack with Node.js backend and React frontend, delivering a complete content-publishing experience.
- Deployed the backend on Render and the frontend on Vercel for reliable, low-cost hosting.

EDUCATION

B.Tech, Siksha 'O' Anusandhan University

2021 – 2025 *CGPA: 7.88 / 10*

ACHIEVEMENTS

- Achieved a **1437 rating on LeetCode**, solving data structures and algorithms problems.
- Achieved a **1200 rating on CodeChef**, participating in competitive programming contests.
