PROFESSIONAL SUMMARY

Software Development Engineer with 3+ years at Philips building production-grade full-stack applications, cloud-native microservices, and developer platforms. Shipped features end-to-end across Java, Spring Boot, React.js, and Node.js; architected observability infrastructure using Prometheus, OpenTelemetry, and Grafana; and built internal developer platform including search indexing pipelines and self-serve automation serving 1,000+ services on Backstage. AWS Certified. LeetCode Top 10%.

KEY SKILLS

Languages: Java, JavaScript, TypeScript

Frontend: React.js, Micro Frontends (Module Federation), HTML, CSS, Component Libraries, Webpack, Vite

Backend: Spring Boot, Node.js, Express.js, RESTful APIs, Microservices, OOP, Design Patterns, Asynchronous Programming

Databases: PostgreSQL, MySQL, MongoDB, Redis

Testing: JUnit, Mockito, Jest

AI & Automation: LangChain, LangGraph, MCP, Prompt Engineering

Cloud & DevOps: AWS (EKS, ECR, S3, Secrets Manager), Kubernetes, Helm, Docker, Crossplane, IaC, GitHub Actions, CI/CD, Kafka

Observability & Tools: Prometheus, OpenTelemetry, Grafana, Distributed Tracing, Backstage, Git, Linux

PROFESSIONAL EXPERIENCE

Philips

Bangalore, India

Software Development Engineer I

Apr 2024 – Present

- Built and shipped full-stack features for **Ultrasound Fleet Manager** across **7+ microservices** – React.js dashboards for fleet utilization, Spring Boot and Node.js backend services, and RESTful APIs for real-time device metrics visualization in multi-cloud environments.
- Optimized high-latency APIs through caching and query optimization, reducing response time by **15% (400ms → 340ms)**; led debug sessions and acted as primary technical escalation point for critical production incidents.
- Architected observability platform using Prometheus, OpenTelemetry, and Grafana, enabling end-to-end distributed tracing and automated alerting across microservices – cutting mean time to diagnose production issues from hours to minutes.
- Built end-to-end PGN network onboarding automation using **Backstage** scaffolder templates – replacing manual ticket creation and code changes with a self-serve form that auto-raises a PR for reviewer approval; reduced onboarding effort by **95%** across **1,000+ services**.
- Built a **Backstage** search plugin that indexes configurable Confluence spaces and surfaces documentation results in the Developer Portal's unified search alongside code and service catalog entries; search-backend agnostic by design, deployed org-wide across Philips engineering.

Philips

Bangalore, India

Software Development Intern

Jun 2023 – Apr 2024

- Developed full-stack features using React.js and Node.js (Express.js) for the Backstage Developer Portal, implementing reusable component libraries and REST API integrations serving 1,000+ internal developers.
- Implemented AWS Secrets Manager integration with EKS via External Secrets Operator across 3+ production deployments, enabling secure, automated secret rotation without application restarts.

PROJECTS

Event-Driven Booking Platform | *Spring Boot, Kafka, PostgreSQL, Docker, Kubernetes, Helm* | GitHub

- Designed and built a scalable microservices-based event booking system using Spring Boot and an API Gateway pattern, with asynchronous Kafka-based messaging for decoupled booking and order processing services.
- Containerized all services with Docker and deployed on Kubernetes using Helm charts with horizontal scaling support; implemented internal service discovery and REST API communication across distributed services.

Backstage Scaffold Insight Viewer Plugin | *Open Source, TypeScript, React.js, Node.js* | npm

- Published open-source full-stack Backstage plugin with real-time analytics dashboards and REST API integrations; adopted by engineering teams to monitor scaffolding usage and track developer platform adoption across the organization.

EDUCATION

Lovely Professional University

Punjab, India

B.Tech in Computer Science and Engineering | GPA: 8.41 / 10

Jul 2020 – May 2024

CERTIFICATIONS & ACHIEVEMENTS

AWS Certified Cloud Practitioner

LeetCode Rating: 1681 | 600+ problems solved | Top 10% globally

Resolved production crash in JSONCrack (10K+ GitHub stars) affecting thousands of active users – merged into main
